Digital Care Transformation – UCB (France)

Entreprise : UCB
Période : **2026 – 2027**
Lieu : Emblem, La Defense, France

About UCB

UCB is a global biopharmaceutical company dedicated to improving the lives of people with severe diseases.

The DCTx (Digital Care Transformation) team leads digital (open) innovation within UCB, developing and maximizing high-impact digital health solutions internationally.

Project description

By joining the DCTx Team, you will be immersed in an international, dynamic, and innovative environment at the heart of digital health transformation. You will contribute to the optimization and enhancement of strategic digital projects integrated into UCB's innovation pipeline. Your mission will be to support the development, implementation, and monitoring of high-potential projects in France, while collaborating with multidisciplinary and multicultural teams.

You will:

- Take ownership of project management activities for identified digital health initiatives.
- You will ensure effective planning, execution, and follow-up of project milestones.
- Collaborate with subject matter experts, external partners, and international stakeholders.
- Contribute to structuring, monitoring, and showcasing projects in line with the global DCTx strategy.
- Take part in internal and external communication around project successes and learnings.
- Benefit from a rich learning and development experience by engaging with multiple departments and diverse projects, gaining broad exposure to the pharmaceutical industry and digital health innovation

-

Methodology

- **Innovation benchmarking & process analysis**: The apprentice will be expected to bring an "outside-in" perspective, applying innovation management concepts from their academic background to enrich project execution. They will also analyse how current processes are running within the DCTx team, identifying areas for improvement and proposing actionable enhancements.
- **Project Management**: Involvement in planning, operational follow-up, coordination with internal and external stakeholders, and tracking of deliverables.
- **Data Collection & Analysis**: Conducting interviews, surveys, and both quantitative and qualitative assessments to evaluate ideas and projects
- **Workshops & Collaborative Sessions**: Participation in ideation workshops, innovation events, and cross-functional brainstorming sessions.
- **Communication & Knowledge Sharing**: Preparing internal and external communication materials, presenting project outcomes, and sharing best practices across teams.

Desired profile

- Master's student (engineering/business school/university) with a strong interest in digital health, innovation, and project management.
- Initiative, curiosity, teamwork skills, and ability to interact in an international environment.
- Analytical skills, rigour, organisational sense, and ability to manage several topics in parallel.
- Proficiency in French and English (written and spoken).
- Interest in new technologies, system transformation, and societal impact.
- Previous experience in project management or healthcare is a plus.

-
